

Carver Board of Health Info

Again, as a result of the recent “NO” vote for septic funding, the Carver Board of Health has taken a much closer look at how we can assist the schools in upgrading the current failed septic system as soon as possible. We are currently working with the School Department to assist in the designer selection process to engage the services of an Engineering firm to provide designs for a new Title 5 compliant system to replace the current system. Responses to a Request for Proposal (RFP) for those services are due in Nov. 2nd. Once the designs are complete the Carver Board of Health will review them for approval and the School Department will then solicit bids for installation.
